

CUYAMACA COLLEGE
COURSE OUTLINE OF RECORD

AUTOMOTIVE TECHNOLOGY 263T – ADVANCED ELECTRONICS ASSESSMENT TEST OUT

1.5 hours laboratory, .5 units

Catalog Description

This portfolio assessment course includes summative and criterion tests for students to prove knowledge, skills, and abilities to perform diagnosis and repair of engine network systems on vehicles in the department laboratory, or by using distance education technologies such as augmented reality or virtual reality. The tests will include recorded and live student demonstrations used for observation and assessment. This course allows a student residing at a distance from training centers to complete certification requirements prior to performing warranty service at a dealership. This course is the assessment of AUTO 263 Advanced Electronics lecture, and AUTO 263L Advanced Electronics Lab. Work Experience at a dealership will ensure a student is prepared to perform network service and repair based on competency evaluation.

Prerequisite

“C” grade or higher or “Pass” in AUTO 162T Electronics Diagnosis and Repair Assessment Test Out or the equivalent.

Entrance Skills

Without the following skills, competencies, and knowledge, students entering this course will be highly unlikely to succeed:

- 1) Demonstrate computer input and output tests and activation using a scan tool
- 2) Obtain and describe normal and abnormal waveforms using a lab-scope
- 3) Test thermistor, potentiometer, variable reluctance, pressure, Hall-effect and related sensors
- 4) Graph and interpret system data using PIDS on a scan tool
- 5) Diagnose and repair computer communication networking faults
- 6) Describe types and functions of computer memory including RAM, ROM, and PROM
- 7) Demonstrate proper diagnosis and repair of electronic system concerns

Course Content

- 1) Lab assesement:
 - a. Introduction and safety
 - b. OBD Connector
 - c. Gateway module
 - d. Break out box or module interface connection
 - e. Pin point tests of network concerns
 - f. Network codes
 - g. Network fault symptoms
 - h. Sensor PID mapping and normal values of Anti-Theft systems
 - i. Computer mapping of PIDS
 - j. Network tests
 - k. Clearing Network codes from modules
 - l. Input devices for complex systems
 - m. Output components for complex systems
 - n. Computer-controlled multiplexing
 - o. HS CAN I, II, III, MS CAN, LIN bus, local area networks
 - p. Terminating resistors

- q. How networks are affected by various faults
- r. Network waveforms and fault conditions
- s. Wiring diagram interpretation
- t. Fault isolation techniques
- u. Lab scope, ohm meter, and voltmeter tests and values of networks

Course Objectives

Students will be able to:

- 1) Demonstrate and describe network electrical failure condition based of CAN waveform patterns.
- 2) Perform network tests using a scan tool, interpret tests results, and rerun test multiple times to isolate the module or network.
- 3) Demonstrate and describe ohms law for diagnosis of terminating resistors.
- 4) Navigate a wiring diagram to perform tests on network circuits.
- 5) Demonstrate knowledge of the workshop manual for code charts and symptom charts for network diagnosis and repair.
- 6) Use a lab scope on various network pins at the gateway module or DLC and display network waveforms.
- 7) Demonstrate the ability to properly program module software and diagnose software related concerns.
- 8) Diagnose hard fault and network concerns using integrated diagnostic software advanced tool functions.
- 9) Perform intermittent and network module diagnosis.

Method of Evaluation

A grading system will be established by the instructor and implemented uniformly. Grades will be based on demonstrated proficiency in subject matter determined by multiple measurements for evaluation, one of which must be essay exams, and skills demonstration.

- 1) Skills-based summative assessment that measures students' ability to successfully complete the necessary tasks related to diagnosis, replacement, repair, testing of automotive network systems.
- 2) Practical exercises that measure students' progress toward mastering tasks related to diagnosis, replacement, repair, testing of networks and module controlled systems.
- 3) Student portfolio of competencies record book.
- 4) Web based training modules.
- 5) Performance projects.

Special Materials Required of Student

- 1) Approved safety glasses
- 2) High speed internet connection
- 3) Students will have access to testing tools and equipment while on campus
- 4) Safety dress code is required while in the lab on campus
- 5) Computer, tablet, or smart device with large screen

Minimum Instructional Facilities

- 1) Auto tech lab (20 service bays)
- 2) Various training vehicles
- 3) Smart classroom
- 4) Diagnostic tools and equipment

Method of Instruction

- 1) Demonstration
- 2) Individual assistance
- 3) Feedback of repair processes regardless of successful or unsuccessful

Out-of-Class Assignments

- 1) Reading assignments
- 2) Writing assignments
- 3) All web based training must be completed prior to “Test Out”
- 4) Student must pass online pretests prior to laboratory tests
- 5) Portfolio will be used to display competencies

Texts and References

- 1) Required (representative examples):
 - a. Student workbooks – will be provided electronically.
 - b. Required:-CDX Master Automotive Technician Series, 2020, ISBN: 9781284170917
 - c. Web Based Training Modules.
 - d. Workshop Manuals will be provided electronically.
- 2) Supplemental: None

Student Learning Outcomes

Upon successful completion of this course, students will be able to:

- 1) Accurately demonstrate repair of various conditions of network systems.
- 2) Identify and repair a network or software system problem by navigating the workshop manual based on symptoms or codes.
- 3) Communicate effectively and professionally in a diverse setting that includes prospective colleagues, clients, and supervisors.
- 4) Comply with environmental health and safety regulations at the state and federal levels.
